UNIFORM DESIGN FROM A POSITION IMAGE IDENTIFICATION: ANALYSIS OF PROJECT APPROACHES

Based on the analysis of the uniform market offerings, as well as using the method of visualizing customer requirements for the appearance of employees, problems associated with the controversial use of composition tools, including identity, that do not allow the consumer to unambiguously identify the type of activity were identified. The proposed solution in the form of «open» design.

Keywords: uniform, identification, identity, design, methodology, shaping, means of composition.

CRITERIA FOR ASSESSING THE OBJECT AT THE LEVEL OF EMOTIONAL DESIGN AND THEIR APPLICATION TO SOLVE ENVIRONMENTAL PROBLEMS

Emotional (intuitive) reactions of the consumer are related to the properties and characteristics of the product or

service. As a result, the design of products and services can be designed to bring the intended feeling into a person's life, to cause an appropriate reflexive reaction. The article proposes criteria for evaluating the design object at the emotional level.

Keywords: emotional design, color, psychology of perception, intuitive level of perception.

SYSTEM OF DESIGN RESEARCH OF SERVICE PERSONAL ROBOTS

The article discusses the principles of creating a design research of service personal robots, based on the analysis of existing objects of service personal robots and in the sub-

sequent synthesis, expressed in the formation of groups of characteristics that influence the process of their shaping.

Keywords: service personal robot, information database, classification system, shaping, factors.

PRINCIPLES OF EDUCATIONAL METHODS OF DEVELOPMENT OF A FIGURATIVE-ASSOCIATIVE THINKING OF A FASHION DESIGNER

The article is devoted to the study of the artistic and analytical approach in working with an inspirational source at the initial stage of design; numerous factors that influence the development of figurative-associative thinking are analyzed. The implementation of this approach is considered on the example of conducting classes in the discipline «Design» at SPbSUITD for students, future specialists in the field of fashion design.

Keywords: fashion, visual, graphic analysis, analytical approach.

DEVELOPMENT OF FIGURATIVE AND EMOTIONAL THINKING OF A FASHION DESIGNER AS A WAY OF ACTIVATING A CREATIVE PROCESS

The article discusses the importance of the development of figurative and emotional thinking of the designer as a necessary factor in the professional formation of a specialist in the field of fashion design, which opens up the possibility of activating the creative potential of the person, stimulating search, research and discovery — actions that lead to non-standard decisions and unexpected finds in creating an artistic image. This approach is analyzed by the example of museum practices at SPbSUITD.

Keywords: fashion design, practice, copy, analytical approach.

MATERIALS AND TECHNOLOGIES OF JEWELRY STYLE MODERN

The paper discusses the materials used in the jewelry of modern style and the technology of their processing. The high creative potential of the masters of style is shown. They have created jewelry masterpieces, laid the foundations of many jewelry styles of the next decades, created new principles for the manufacture of highly artistic jewelry of mass demand.

Keywords: jewelry, modern style, materials, technology.

ENVIRONMENTAL DESIGN AND ECO-FRIENDLY URBAN DEVELOPMENT: THE PROJECT «LABORATORY GLASSWARE»

The purpose of the article is to show the cultural, social, commercial significance of the environmental idea in the development of environmental design, through the realization of the project «Laboratory glassware». Objectives: to demonstrate the possibility of using concrete and lacquer to create a sculpture, located outside the building; to note the importance of re-use of materials in the design.

Keywords: environmental design, eco-friendly development, urban development, lacquer, concrete, sculpture.

LITTLE PLASTIC ERA OF ANCIENTITY

The article gives a brief overview of the small plastics of the era of antiquity, civilizations of Ancient Greece, Etruscans, Ancient Rome. The process of human cognition of the technology of manufacturing products from various materials, such as clay, stone, bone, precious and non-ferrous metals, is shown. Starting from the first products, we examined how the process of forming the image of the monuments of this type of art was gradually going on, and the prominent role in the development and formation of world culture that the era of antiquity gave us.

Keywords: small plastic, plastic, sculpture of small forms, antiquity, arts and crafts, metal.

MOTIVES, FEATURES COMPOSITE CONSTRUCTION AND COLORS IN TRADITIONAL ART ORNAMENT EMBROIDERY OF THE CRIMEAN TATARS

In the early stages of development, the ornament was not just a pattern, but a sign or symbol, behind which the content was determined. Its form varies depending on the specific situation or culture of the country.

Keywords: Crimean Tatars, ornament, compositional structure, color features.

EXCLUSIVE VISUAL-SYMBOL COGNITIVE COGNITIVE DYNAMIC SYSTEM (VKIDS) METAPHORS MODEL DESIGN

This work explores the processes of solving the problems of learning through the use of cognitive technologies in the subject area of design objects, enabling the optimal semiotic information to be obtained and used in the creation and development of artistic images of jewelry based on morphogenesis of the existing reality. One of the options in achieving the stated goal is to apply the principles of NBICS — convergence in cultural and social systems of large dimension, in which as a subsystem is included design. The development and improvement of design theory using the morphology and colorism of VKIDS with fuzzy and hybrid structures, post-classical methodology in interaction with artetry and artonics creates the effect of strengthening and harmonization creative design processes.

Keywords: hybridization, design, artetry, artonics, VKIDS, modeling, post-classical research methodology, NBICS-convergence.
