

TABLE OF CONTENTS

SYSTEM ANALYSIS, CONTROL AND INFORMATION PROCESSING

A. V. Demidov, A. G. Makarov Methodology of system analysis of deformation properties of polymer textile materials	5
V. I. Wagner, K. E. Razumeev, A. S. Konovalov, E. S. Chistyakova Mathematical modeling and digital prediction of mechanical processes of textile polymers	10
S. V. Kiselev System analysis of viscoelastic creep of geotextile nonwoven materials	16

MACHINES, AGGREGATES AND TECHNOLOGICAL PROCESSES

I. E. Menyailo Application of neural networks for the diagnosis of the technical condition of the loom	22
M. S. Chepchurov, B. S. Chetverikov, V. E. Minasova, I. A. Teterina Simulation of the operation of a portable manipulator based on the kinematics of a CAD model.	28
Qusai Mahdi Hamdian Al-Abu Jaiash Deformation of the flap in a vacuum grip: experiments and models (review)	34
Ali Abdulzaxra Gatea Alshebli Computer simulation of the operation of the mechanism of package end decompaction	40

PRODUCT QUALITY CONTROL. STANDARDIZATION. ORGANIZATION OF PRODUCTION

E. A. Ageeva, L. V. Makhova, A. S. Gorshkov Structure of energy-saving at light industry enterprises	45
A. A. Kirichenko, Ya. V. Denisova The use of risk assessment methods to minimize the occurrence of inconsistencies in the development of design documentation	50
V. V. Sidorin, N. B. Khalilulina Forecasting and management of research and development work by Markov methods	58
A. Yu. Tumanov A method for reducing the risks of projects to create systems to ensure the stability of the functioning of instrument-making facilities	63
N. V. Khomyakov Lean 4.0. The impact of Industry 4.0 tools on lean management	68
A. A. Azanova, I. G. Davletbayev, A. F. Gaisin, G. T. Kalimullina On the issue of the quality denim clothing	76
N. V. Pereborova Solving the problem of improving the quality of textile and light industry products based on digital technologies.	79
A. V. Demidov, N. V. Pereborova, N. S. Klimova Development of digital criteria for qualitative assessment of consumer properties of textile and light industry products.	86
A. G. Makarov, N. V. Pereborova Development of methods for control of performance characteristics of materials in textile and light industry.	92

TECHNOLOGY AND PROCESSING OF SYNTHETIC AND NATURAL POLYMERS AND COMPOSITES

N. P. Midukov, T. I. Efremov, N. V. Evdokimov

Estimation of grinded larch wood particle size distribution using optical microscopy and ImageJ program . . . 98

A. Yu. Svetlobov, M. A. Litvinov, N. P. Midukov, V. S. Kurov, M. V. Kolosova

The method and device for paper and cardboard samples to visualization of microstructure in cross section 104

TECHNOLOGY OF PRODUCTION OF TEXTILE AND LIGHT INDUSTRY PRODUCTS

A. G. Makarov

Prediction of thermoviscoelasticity of polymer textile materials 109

N. S. Klimova, A. G. Makarov

Spectral-time theory of viscoelasticity of polymer textile materials. 114

A. A. Kozlov, S. V. Kiselev

Digital prediction of deformation processes of technical fabrics 119

A. A. Kozlov

Computer prediction of creep of nonwoven materials 124

Authors list 132
